## EXPERIENCE

### Adstra

March 2025 - Present

Software Engineer - Applications

New York, NY

- Engineered an automated financial document pipeline in Python that maps JSON, TXT, and XML data onto Word documents, processing 20,000+ documents monthly for 10,000+ clients and 300 internal employees and managing over \$200 million, serving as the company's primary financial communication channel with clients/stakeholders.
- Embedded a class-based architecture using dataclasses, data structures, and utility functions to parse and structure incoming data, alongside libraries for automated email delivery, printing, logging, metrics tracking, and CSV exports.
- Architected a custom ORM in Python and MySQL to enable relational persistence, dynamic ingestion, and batching across high-volume financial data, supporting two distinct business lines and increasing program efficiency by 35%
- Designed and deployed a React UI dashboard backed by Node Rest APIs to orchestrate document workflows and surface operational metrics, supporting a scalable backend service aligned with microservice architecture while delivering data to the company's month-end summary reports and financial models.

### ApartmentMaid

September 2023 - March 2025

Founding Software Engineer - FullStack

Brooklyn, NY

- Engineered a scalable client-facing SaaS booking application for an early seed apartment service startup using NextJS, TypeScript, and PostgreSQL, while collaborating with another developer under a CI/CD pipeline, driving over 300 bookings and over \$15,000 in revenue within the first 6 months.
- Constructed a high-performance backend using NextJS API routes, server-side rendering, and RESTful APIs, leveraging Supabase as a serverless BaaS to optimize CRUD requests and session/storage handling.
- Structured and managed diverse data models using Prisma ORM and PostgreSQL, handling 500+ entries of data across 12+ SQL tables, along with strengthened platform security with Supabase RBAC and RLS policies.
- Implemented third-party services such as Stripe for secure PCI-compliant transactions and onboarding of business owners, Nodemailer for SMTP services, and NextUI and Framer Motion for a component-based architecture and adaptive design, expanding the platform's functionality.
- Expanded the customer base by 25% by designing two data visualization portals for different user groups, automating email campaigns for 400+ users using self-built email templates, and maintaining site reliability by monitoring deployments through Vercel, driving a 15% increase in sales and scaling the business to other states.

## SOFTWARE ENGINEERING PROJECTS

**Full Stack Developer** | [AI Powered College Platform](#) | NextJS | OpenAI | Pinecone | Stripe |

June 2026 - Present

- Launched a scalable CRUD application leveraging account creation/session handling, AI-driven college guidance, and diverse user communities using NextJS, MongoDB, Axios, Python, Clerk, and third-party services, achieving 150+ signed-up users within the first week.
- Constructed and trained an AI-driven chatbot using the OpenAI GPT-4 API and Pinecone to store and utilize vector embeddings, enabling semantic search and matching across 500+ colleges from the College Scorecard API to user data.

**Cloud Developer** | *AWS IAM Credential Compromise Simulation* | IAM | GuardDuty | CloudTrail |

December 2025

- Orchestrated and executed an AWS cloud security simulation to model unauthorized IAM credential usage and privilege escalation scenarios, including federated access via AWS IAM Identity Center and SAML providers.
- Deployed real-time detection and automated response workflows using native AWS security services to identify compromised access keys, anomalous federation switches, and credential misuse.

## SKILLS

**Programming Languages:** Python3, TypeScript, JavaScript, Java, C++, C, C#, SQL

**Full Stack Development:** NextJS, ReactJS, VueJS, HTML5/CSS3, Node.js, Express.js, Django, Flask, Spring Boot

**Database & Management:** PostgreSQL, MySQL, Supabase, MongoDB, Prisma, Firebase, Snowflake, Hadoop, SSH

**DevOps & Cloud:** AWS(Lambda, Nex, EC2, S3, Elasticsearch, RDS), Docker, Kubernetes, GCP, RESTful APIs, Jenkins

**Tools & Technologies:** Git, Bash, Splunk, Shell Scripting, RESTful APIs, GraphQL, Microservices, CI/CD Pipelines, Jira, Agile Methodology, OpenAI, Claude, Postman, VSCode, Selenium, Snowflake, Linux, third-party API integration, TCP/IP

## EDUCATION

**New York University, Tandon School of Engineering,**

Cybersecurity, M.S. GPA: 3.5

Computer Engineering, B.S.

New York, NY

Expected Graduation: Dec 2026

May 2023
